	5.107	8.420	2.873	9.636	20.248	27.844

The value of actual exports is calculated as an arithmetic average of direct and mirror data of reliable reporters over the past five years. Actual exports to a region, including to the world as a whole, only include exports to markets where the country has export potential. At an aggregate level, actual exports can therefore be equivalent to or lower than export values recorded in other trade databases, such as the ITC Trade Map.
